CHIBA UNIVERSITY

Towards the development of a **World-class Medical Research and Education Hub**

Welcome to the Graduate School of Medicine.

There are two fields of medicine: “basic medicine” and “clinical medicine.” With more than 100 years of history, Chiba University Graduate School of Medicine and School of Medicine now focus on the promotion of research in “Innovative Therapeutics (Chiryougaku in Japanese),” a new field that connects those two fields of medicine and seeks to cultivate “Physician-scientists” and “Medical researchers.” A physician-scientist is someone who pursues research in “Therapeutics” and translates the results of state-of-the-art basic research into the development of new therapies to improve the QOL of patients and/or to cure refractory diseases.

While enrolled in the School of Medicine, students may participate in the “Scholarship Program” and several “Student Exchange Programs.” Through their involvement in discussions and activities, regardless of age, professional field, school or nationality, students are able

An aerial photograph of the Chiba University campus and the surrounding city of Chiba, Japan. The image shows a dense urban area with a mix of residential buildings and commercial structures. In the foreground, the university campus is visible, featuring several large, modern buildings, a baseball field, and a tennis court. The campus is surrounded by lush green trees and a well-maintained road network. The background shows a vast expanse of residential housing, with a prominent elevated highway cutting through the city.

to learn more than medical knowledge and skills. They can learn the significance of research in basic, clinical and social medicine, collect the scientific information necessary to plan and implement a research project and engage in logical and critical thinking.

The Graduate School of Medicine offers the “CHIBA Innovation Program for Therapeutics (CIPT)” and the “Leading Graduate School Program (LGS)” with the goal of developing future leaders in Therapeutics, specifically in the treatment of immune-related diseases, such as cancer, allergies and arteriosclerosis.

Students will be exposed to a wider view for the future of medicine and options for their future through our unique education that promotes vertical and horizontal coordination. We hope to make a social contribution to the fields of medicine and health care by producing the best minds capable of meeting the needs of our diverse society.

Dean, Toshinori Nakayama, M.D., Ph.D.

The Departments of Graduate School of Medicine

Core Research Departments

Neuroscience

- Biochemistry & Genetics
- Cognitive Behavioral Physiology
- Neurobiology
- Psychiatry
- Ophthalmology and Visual Science
- Neurology

- Neurological Surgery
- Orthopaedic Surgery

Respiratory and Cardiovascular Medicine

- Pharmacology
- Diagnostic Pathology
- Respiratory Medicine
- Cardiovascular Medicine
- General Thoracic Surgery
- Cardiovascular Surgery

Anesthesiology

Gastroenterology and Hepatology

- Molecular Pathology
- Gastroenterology and Nephrology
- General Surgery
- Frontier Surgery

Medical Life Science

- Molecular Infectiology
- Molecular
- Virology
- Infection and Host Defense
- Reproductive Biology and Medicine

- Reproductive Medicine
- Urology
- Molecular Diagnosis
- Emergency and Critical Care Medicine
- Dermatology
- Pediatric Surgery
- Plastic and Reconstructive Surgery
- Health Science
- Bioenvironmental Medicine
- Public Health
- Occupational and Environmental Medicine
- Legal Medicine
- Japanese-Oriental (Kampo) Medicine
- Medical Education Office
- Diagnostic Medicine
- Clinical Research and Evaluation of the Medical Therapeutics
- Medical Informatics
- Pharmacotherapy

Advanced Research Departments

Cancer Science

- Molecular and Tumor Pathology
- Medical Immunology
- Functional Genomics
- Oral Science
- Otorhinolaryngology, Head and Neck Surgery
- Diagnostic Radiology and Radiation

Oncology

- Medical Oncology
- Clinical Oncology
- Advanced Biomedical Science
- Medical Physiology
- Biomedical Science
- Developmental Biology
- Allergy and Clinical Immunology
- Mucosal Immunology
- Immunology
- Molecular Oncology
- Cellular and Molecular Medicine
- Bioinformatics
- Comparative Pathology
- Clinical Cell Biology and Medicine
- Pediatrics
- Genome Research and Clinical Application

Future Medicine Global Therapeutics

- Innovative Therapeutics
- Future Medicine Research
- Global Clinical Research

Advanced Biomedical Science

- Innovative Medicine
- Regenerative Medicine
- Disease Biology and Molecular Medicine

Laboratory Animal Center

Clinical Skills Center

Data

Total Students as of May 1st 2016	1,379	
Undergraduate students	739	
Master's students	122	
Doctoral students	518	
Students Newly Enrolled as of 2016	275	
Undergraduate students	119	
Master's students	27	
Doctoral students	129	
Degrees Awarded as of 2015	136	
Staff as of May 1st 2016	195	
Academic staff	154	
Administrative/Technical staff	41	
Researchers Visiting Abroad as of 2015	300	
International Researchers as of 2015	30	
Students Studying Abroad as of 2015	56	
International Students as of 2015	20	
Sister Universities as of May 1st 2016	5	
U.S.A	3	
New Zealand	1	
South Korea	1	
University Hospital as of 2015		
Average patients per one day	2,134	
Average inpatients per one day	715	

School of Medicine

The history of Chiba University School of Medicine can be traced back as early as 1874, when its predecessor was founded as a private hospital by donations from the local community. In 1876, it became a prefectural institution with medical teaching facilities and was named the Chiba Public Hospital. In 1923, it became the Chiba Medical College and was incorporated into the School of Medicine at Chiba University in 1949. Alumni from this school have contributed greatly to the progress of medicine in Japan.

Faculty members of the school belong to the Graduate School of Medicine and the University Hospital. The number of students admitted is 122 per year. The School of Medicine requires six years (117 students) and four years (5 students of the MD-PhD course) of attendance, as well as sufficient ability to complete the basic and clinical medical courses.

Admission Policy

The School of Medicine educates the students in the hope that they will become leading medical doctors, physician scientists and life scientists. Therefore, to be admitted into an undergraduate program of the School of Medicine, promising applicants are expected to be healthy and highly intellectual individuals with the following:

1. Capability of creative and logical thinking
2. High ethical standards and a strong sense of mission
3. Willingness to sincerely devote themselves to people and community
4. Ambition to become leading physician scientists in the world

Graduate School of Medicine

The Graduate School of Medicine was founded in 1955, and since then has offered a Doctoral degree program (Ph.D degree). For the further advancement of biomedical sciences in the 21st century, the Graduate School of Medicine was reorganized in 2001 and 2012. Faculty members of the School of Medicine have been transferred to the Graduate School of Medicine and are engaged in advanced research in the areas of biological sciences and applied clinical medicine. In addition, faculty members are responsible for education in the School of Medicine and the Graduate School of Medical and Pharmaceutical Sciences.

University Hospital

The Chiba University Hospital has been one of Japan's preeminent institutions in medical education, medical research and patient care for over a century. The University Hospital strives to disseminate its innovative patient therapies and scientific discoveries locally and internationally. We are committed to training a new generation of physicians, scientists and co-medical staff. In addition, the Hospital provides opportunities for medical practitioners and physicians working in satellite hospitals to keep up with recent developments in medical science, as well as patient care, in order for the same quality of medical care to be shared in any region. The University Hospital also plays an important role in promoting the development of public health in the community and across Japan.
